Framework – NUS_PSL_2010

Framework – NUS_PSL_2012

Framework – NUS_PSL_2012

I Generalized Hierarchical Matching

- ▶ Traditional Pooling: SPM = approximate geometric constraint
- ▶ Not optimal for object recognition due to misalignment

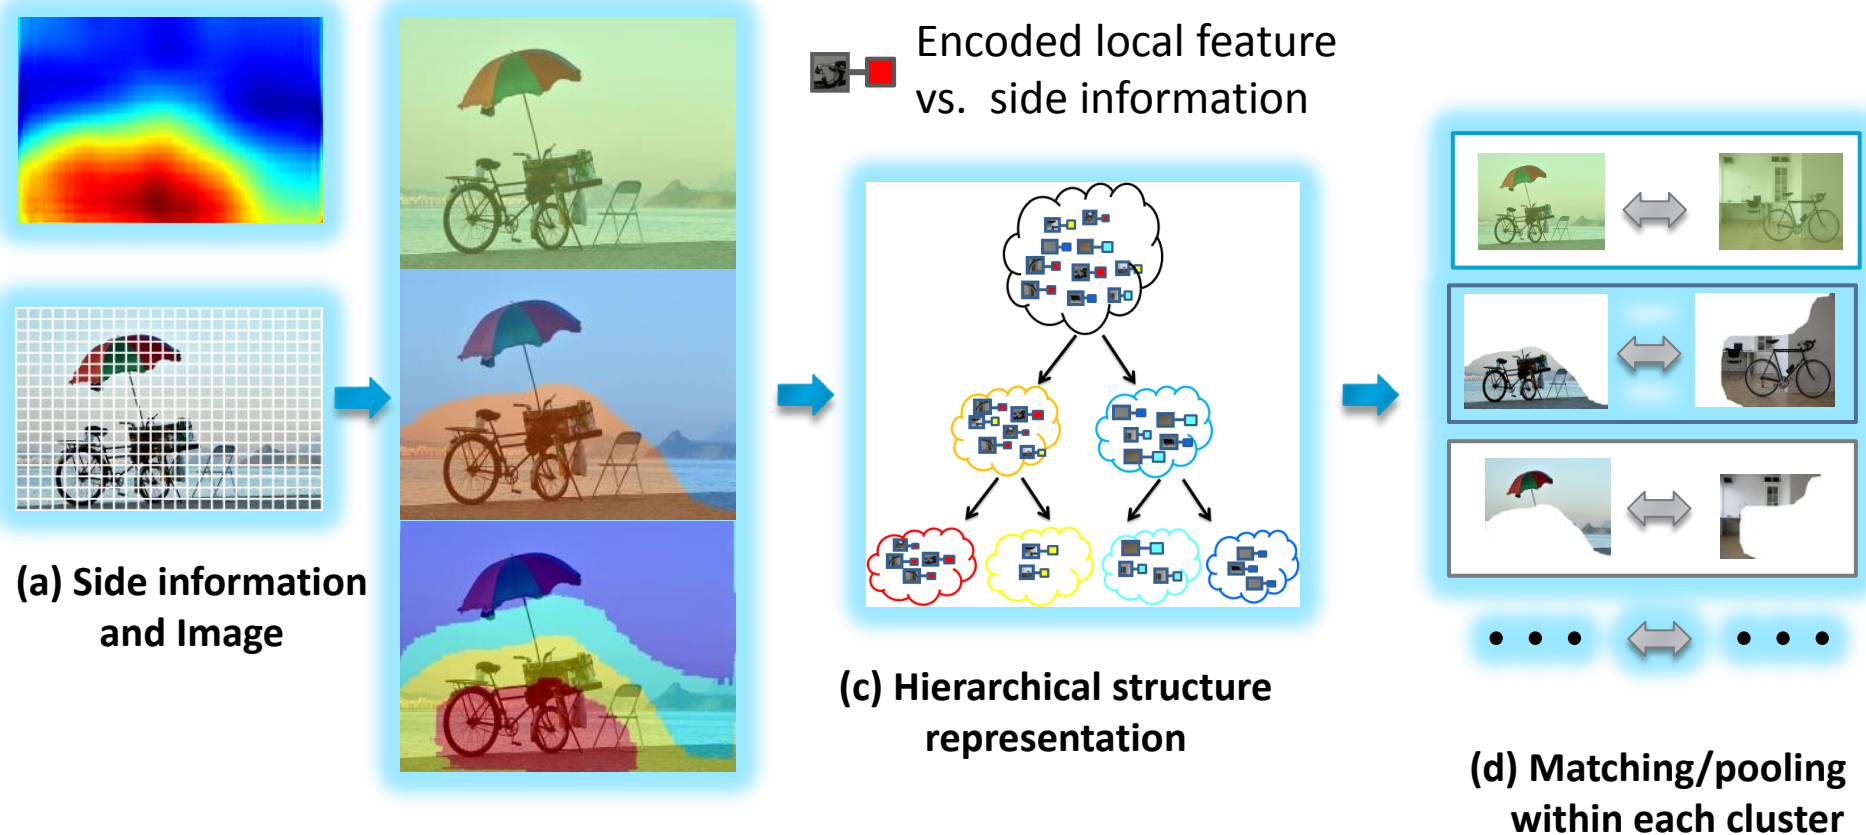

(a) Images

(b) SPM partitions

(c) Object Confidence Map partition

I Generalized Hierarchical Matching

Utilize side information to hierarchically pool local features

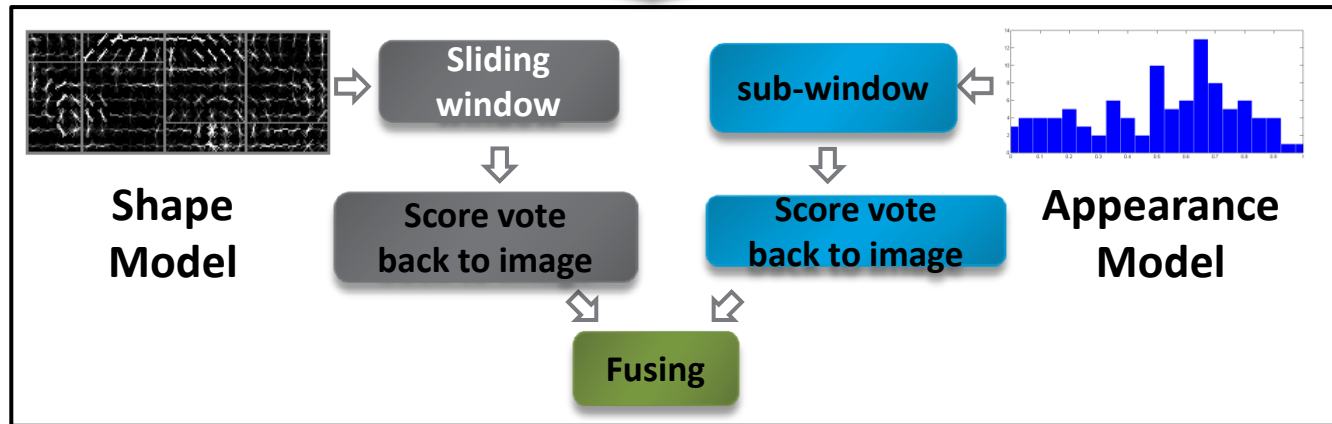

I Generalized Hierarchical Matching

Side Information - Detection Confidence Map

Process

Object Confidence Maps

II Sub-Category Mining

- ▶ Intra-class diversity:
 - ▶ Foreground distribution is diverse due to **appearance**, **occlusion** variance
 - ▶ Aspect ratio is not enough to grasp these types of variance

II Sub-Category Mining

► Intra-class diversity:

- Foreground distribution due to **appearance**, **occlusion** vs
- Aspect ratio variance

Subcategory awareness
is necessary !

II Sub-Category Mining

► Inter-class ambiguity:

Chairs are ambiguous with sofas

II Sub-Category Mining

► Inter-class ambiguity:

- Some sub-categories may be ambiguous with certain specific object categories

II Sub-Category Mining

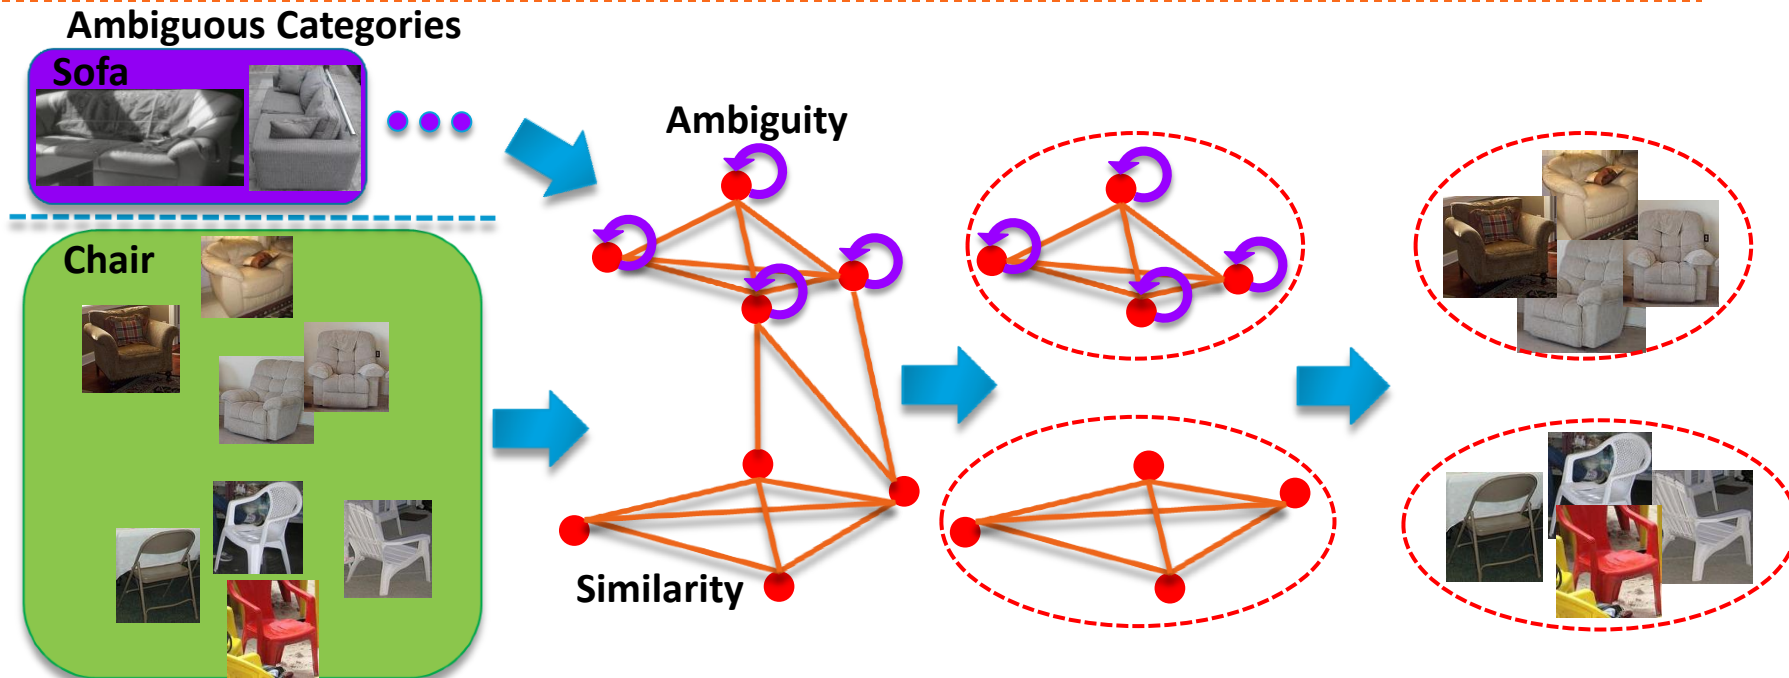

► Inter-class ambiguity:

- Some sub-categories may be ambiguous with certain specific object categories

Solution: Ambiguity guided subcategory mining

II Sub-Category Mining

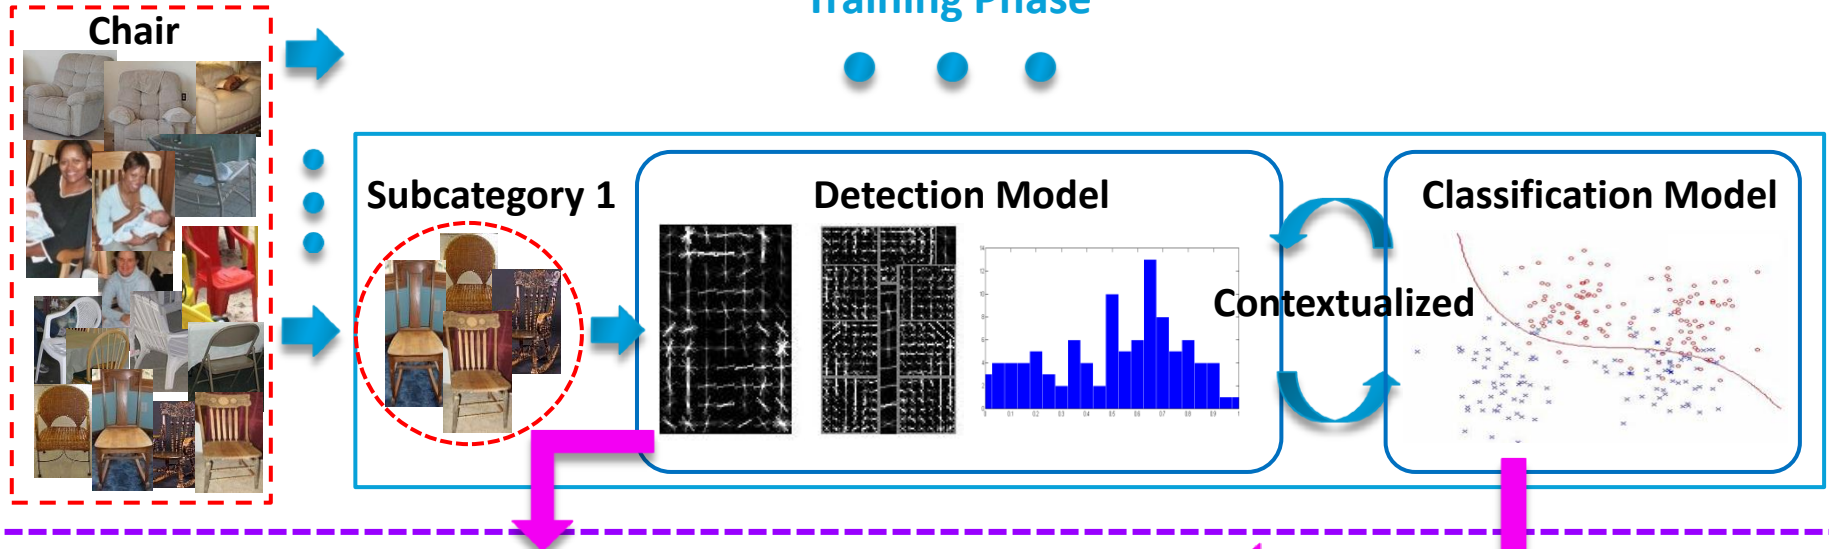

Subcategory Mining based on both **Similarity & **Ambiguity****

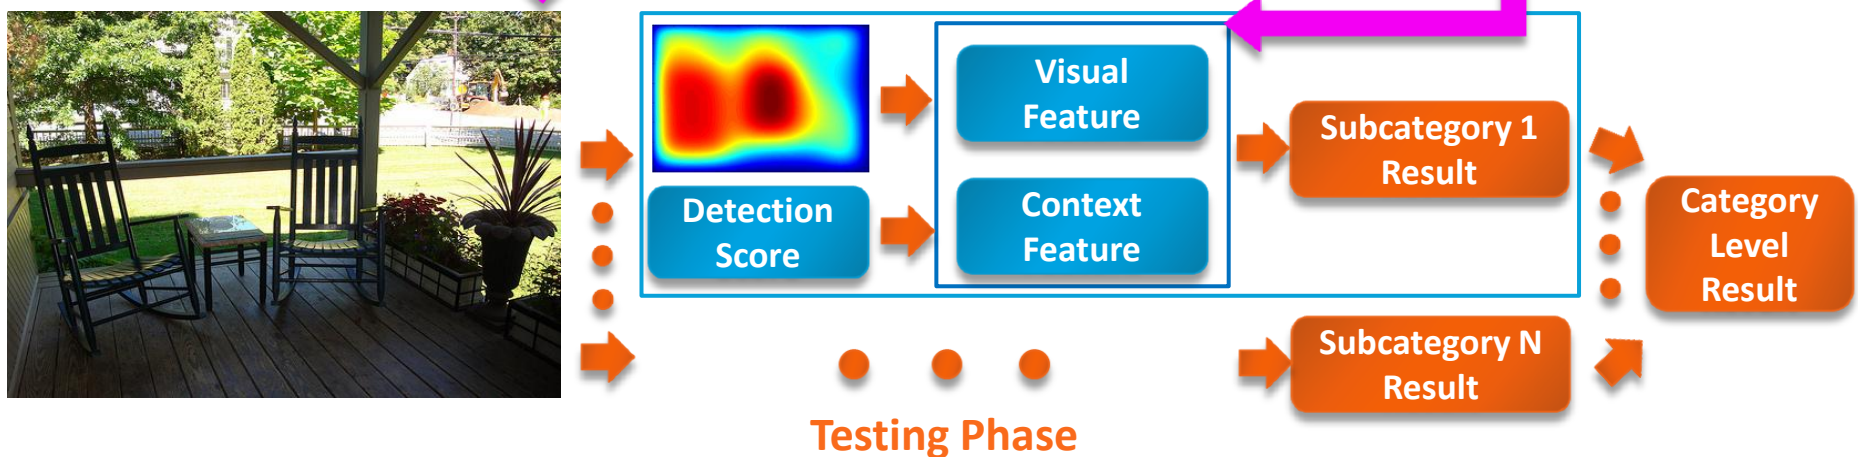

- ▶ Calculate the sample intra-class **similarity**
- ▶ Calculate the sample inter-class **ambiguity**
- ▶ Detect dense subgraphs by graph shift algorithm [1]
- ▶ Subgraphs to subcategories.

Sub-Category Aware Detection & Classification

Training Phase

Testing Phase

The results

	2010		2011		2012	
	Our Best	Other's Best	Our Best	Other's Best	Our Best	Other's Best
aeroplane	93	93.3	95.5	94.5	97.3	92
bicycle	79	77	81.1	82.6	84.2	74.2
bird	71.6	69.9	79.4	79.4	80.8	73
boat	77.8	77.2	82.5	80.7	85.3	77.5
bottle	54.3	53.7	58.2	57.8	60.8	54.3
bus	85.2	85.9	87.7	87.8	89.9	85.2
car	78.6	80.4	84.1	85.5	86.8	81.9
cat	78.8	79.4	83.1	83.9	89.3	76.4
chair	64.5	62.9	68.5	66.6	75.4	65.2
cow	64	66.2	74.7	74.2	77.8	63.2
diningtable	62.9	61.1	68.5	69.4	75.1	68.5
dog	69.6	71.1	76.4	75.2	83	68.9
horse	82	76.7	83.3	83	87.5	78.2
motorbike	84.4	81.7	87.5	88.1	90.1	81
person	91.6	90.2	92.8	93.5	95	91.6

Discussions

- ▶ Classification, detection and segmentation are essentially closely related problems. It is predictable that these three problems shall be explored within a unified framework in the near future!
- ▶ Effectiveness seems fine now, how about efficiency?

Acknowledgement

- ▶ We would thank Mr. Tsutomu MURAJI, Mr. Keisuke MATSUO, Mr. Ryouichi KAWANISHI from Panasonic Corporation for their support to this collaboration project.

Thank You!
